

Database Technology

Programme course

8 credits

Databasteknik

TDDD46

Valid from: 2017 Spring semester

Determined by

Board of Studies for Computer Science
and Media Technology

Date determined

2017-01-25

Replaced by

TDDD37

Main field of study

Computer Science and Engineering

Course level

First cycle

Advancement level

G2X

Course offered for

- Information Technology, M Sc in Engineering

Entry requirements

Note: Admission requirements for non-programme students usually also include admission requirements for the programme and threshold requirements for progression within the programme, or corresponding.

Prerequisites

Basic programming as well as data structures and algorithms.

Intended learning outcomes

The aim of this course is to give a thorough introduction to the theoretical and practical issues underlying the design and implementation of modern database systems. After the completion of the course you should be able to:

- explain and use important terminology in text-based information management in a correct way.
- design a data model using EER diagrams.
- design and use a relational database.
- explain the theory behind the relational model and how this affects good design of databases.
- explain which file structures in the database management system can be used to implement a database system.
- explain the basic principles for indexing a database.
- explain which problems can occur when several users use the database and solutions to this.
- explain how a database can guarantee persistence of data.

Course content

- Principles for general database management systems: DBMS,
- Methods for database design and use. Datamodeling with ER,
- Relational databases, SQL and relational algebra
- Normalisation of relational databases
- Datastructures for databases, indexing
- Transactions and concurrency
- Recovery of databases
- Exempels on how effective data management can support sustainable development through a scenario.

Teaching and working methods

The course consists of lectures, laboratory work and a project. Lectures are devoted to theory and techniques. Database design and implementation techniques are practised in the laboratory work.

Examination

BAS1	Work in PBL group	1 credits	U, G
LAB1	Laboratory work	4 credits	U, G
TEN1	Written examination	3 credits	U, 3, 4, 5

Grades

Four-grade scale, LiU, U, 3, 4, 5

Other information

Supplementary courses: Advanced Data Models and Databases; data mining.

Department

Institutionen för datavetenskap

Director of Studies or equivalent

Patrick Lambrix

Examiner

Olaf Hartig

Education components

Preliminary scheduled hours: 66 h

Recommended self-study hours: 147 h

Course literature

Additional literature

Books

Elmasri, R. and Navathe, S. B., *Fundamentals of Database Systems* 3e, 4e, 5e
eller 6e upplaga Addison Wesley

OBSERVE: The title of the 6th edition is: Database Systems - Models, Languages,
Design, and Application Programming.

Common rules

Regulations (apply to LiU in its entirety)

The university is a government agency whose operations are regulated by legislation and ordinances, which include the Higher Education Act and the Higher Education Ordinance. In addition to legislation and ordinances, operations are subject to several policy documents. The Linköping University rule book collects currently valid decisions of a regulatory nature taken by the university board, the vice-chancellor and faculty/department boards.

LiU's rule book for education at first-cycle and second-cycle levels is available at http://stydokument.liu.se/Regelsamling/Innehall/Utbildning_pa_grund-_och_avancerad_niva.
