

# **Embedded Systems Design**

Programme course

4 credits

Konstruktion av inbyggda system

TDDI08

Valid from: 2018 Spring semester

**Determined by**Board of Studies for Computer Science and Media Technology

**Date determined** 

# Main field of study

Computer Science and Engineering

### Course level

First cycle

### Advancement level

G<sub>2</sub>F

#### Course offered for

- Computer Engineering, B Sc in Engineering
- Engineering Electronics

# **Entry requirements**

Note: Admission requirements for non-programme students usually also include admission requirements for the programme and threshold requirements for progression within the programme, or corresponding.

# **Prerequisites**

Basic courses in digital design, computer architectures, programming.

# Intended learning outcomes

The aim of the course is to address the particular problems concerning the design of complex embedded systems. Modern design methodologies are presented with an emphasis on early design phases, such as modeling, verification and system-level synthesis, not covered by traditional methods.

After completing the course, the students should be able to:

- Apply modern system-level methods and tools for the design of real-time embedded systems.
- Use modern modeling, verification and simulation tools in the context of system-level design.
- Analyze the particular features of the application and select the most appropriate modeling approach.
- Evaluate the implications of system level design decisions, regarding system architecture, task scheduling and mapping, on the final system performance, cost, and power consumption.
- Describe the complex interactions between hardware architecture and software implementation.
- Perform design space exploration using a system-level simulation environment.

#### Course content

Embedded systems and their design, Design flow, Specification and modeling of embedded systems, Simulation and estimation, Architectures for embedded systems, Mapping and scheduling.

# Teaching and working methods

The course consists of a series of lectures, lesson and laboratory exercise.

### Examination

LAB1	Laboratory work	1.5 credits	U, G
TEN <sub>1</sub>	Written exam	2.5 credits	U, 3, 4, 5

### Grades

Four-grade scale, LiU, U, 3, 4, 5

### Department

Institutionen för datavetenskap

# Director of Studies or equivalent

Ola Leifler

#### **Examiner**

Petru Eles

### Course website and other links

http://www.ida.liu.se/~TDDIo8

# **Education components**

Preliminary scheduled hours: 42 h Recommended self-study hours: 65 h

#### Course literature

Peter Marwedel: "Embedded System Design", Springer, 2nd edition, 2011
