

# Fluid Power Systems, Advanced Course

Fluidmekanisk systemteknik, avancerad kurs 6 credits

Programme course

TMHP06

Valid from: 2026 Spring semester

Determined by	Main field of study	
Board of Studies for Mechanical Engineering and Design	Mechanical Engineering	
Date determined	Course level	Progressive specialisation
2025-08-28	Second cycle	A1N
Revised by	Disciplinary domain	
	Technology	
Revision date	Subject group	
	Mechanical Engine	eering
Offered first time	Offered for the last time	
Spring semester 2021		
Department	Replaced by	
Institutionen för ekonomisk och industriell utveckling		

### Course offered for

- Master of Science in Mechanical Engineering
- Master's Programme in Mechanical Engineering

## **Prerequisites**

Fluid Power Systems, Automatic Control

## Intended learning outcomes

The course is intended to give a broad knowledge in hydraulic system design. After the course, the student should:

- be able to analyze and discuss fluid power systems in terms of performance, power consumption, controllability and dynamic properties.
- be able to model and implement dynamic analyses of fluid power systems.
- be able to create and apply calculation basis for component selection and system design.
- be able to explain component functions and component characteristics in the field of fluid power.
- be able to incorporate and account for research literature in relevant journals.

### Course content

Hydraulic machines: Design of different types of pumps and motors. Analyses of losses and efficiency models. Flow pulsations from hydraulic machines. Control actuators for variable displacement machines. Dynamic properties of hydraulic machines. Simulation and optimization of fluid power pumps/motors.

Transmission systems: Mobile and industrial applications. Completely hydraulic and hydro mechanical divided types of transmissions - principles of automatic control and dynamic characteristics. Servo systems for control of shaft speed and torque. Simulation of transmission drive systems.

Valve-controlled systems: Steady state and dynamic properties of pressure and flow control valves. Mobile and industrial applications. Open and closed systems. Load sensing hydraulic systems. Simuation of valve-controlled systems.

## Teaching and working methods

The teaching consists of lectures, lessons and laboratory exercises

### Examination

UPG1	Scientific article	1.5 credits	U, G
LAB1	Laboratory work	1 credits	U, G
UPG2	Assignments	3.5 credits	U, 3, 4, 5

#### Grades

Four-grade scale, LiU, U, 3, 4, 5

#### Other information

#### **Supplementary courses**

TMMS13 - Electro Hydraulic Systems TMPM06 - Project Course Advanced - Mechatronics

#### About teaching and examination language

The teaching language is presented in the Overview tab for each course. The examination language relates to the teaching language as follows:

- If teaching language is "Swedish", the course as a whole could be given in Swedish, or partly in English. Examination language is Swedish, but parts of the examination can be in English.
- If teaching language is "English", the course as a whole is taught in English. Examination language is English.
- If teaching language is "Swedish/English", the course as a whole will be taught in English if students without prior knowledge of the Swedish language participate. Examination language is Swedish or English depending on teaching language.

#### Other

The course is conducted in such a way that there are equal opportunities with regard to sex, transgender identity or expression, ethnicity, religion or other belief, disability, sexual orientation and age.

The planning and implementation of a course should correspond to the course syllabus. The course evaluation should therefore be conducted with the course syllabus as a starting point.

The course is campus-based at the location specified for the course, unless otherwise stated under "Teaching and working methods". Please note, in a campus-based course occasional remote sessions could be included.
