

Radio Electronics

Programme course

6 credits

Radioelektronik

TSEK02

Valid from: 2017 Spring semester

Determined by

Board of Studies for Electrical
Engineering, Physics and Mathematics

Date determined

2017-01-25

Main field of study

Electrical Engineering

Course level

Second cycle

Advancement level

A1X

Course offered for

- Electronics Engineering, Master's Programme
- Computer Science and Engineering, M Sc in Engineering
- Information Technology, M Sc in Engineering
- Applied Physics and Electrical Engineering - International, M Sc in Engineering
- Applied Physics and Electrical Engineering, M Sc in Engineering
- Communication Systems, Master's programme

Entry requirements

Note: Admission requirements for non-programme students usually also include admission requirements for the programme and threshold requirements for progression within the programme, or corresponding.

Prerequisites

Basic knowledge in circuit theory, electronics, and mathematic.

Intended learning outcomes

The course gives the student basic knowledge in radio electronics. The system perspective is addressed both in the context of traditional radio and today's wireless communication systems. The objectives of the course is that the student will learn operation principles of radio systems and their fundamental limitations. After the course the students should be able to:

- explain the principles of radio transmission and reception
- explain the existing physical and technical limitations of a radio system
- analyze the functionality of radio transmitters and receivers
- calculate basic radio specifications in terms of power, gain, noise and frequency for basic modulation schemes
- explain differences between traditional radio and today's digital radio systems

Course content

Overview of a traditional radio and today's communication systems. Basic modeling of an RF communication channel. Modulation, detection, and multiple access schemes. Overview of transceiver architectures and operation principles of RF blocks. Limitations due to power, frequency, noise and nonlinear distortions.

Teaching and working methods

Lectures, tutorials, laboratory work.

Examination

LAB1	Laboratory Work	2 credits	U, G
TEN1	Written Examination	4 credits	U, 3, 4, 5

Grades

Four-grade scale, LiU, U, 3, 4, 5

Other information

Supplementary courses: Radio Frequency Integrated Circuits (TSEK03), Radio Frequency Transceiver Design (TSEK38), VLSI Design Project, CDIO (TSEK06)

Department

Institutionen för systemteknik

Director of Studies or equivalent

Tomas Svensson

Examiner

Ted Johansson

Education components

Preliminary scheduled hours: 44 h

Recommended self-study hours: 116 h

Course literature

Additional literature

Books

B. Razavi, (2012) *RF Microelectronics 2*
ISBN: 978-0-13-283941-9
Pearson Education

Common rules

Regulations (apply to LiU in its entirety)

The university is a government agency whose operations are regulated by legislation and ordinances, which include the Higher Education Act and the Higher Education Ordinance. In addition to legislation and ordinances, operations are subject to several policy documents. The Linköping University rule book collects currently valid decisions of a regulatory nature taken by the university board, the vice-chancellor and faculty/department boards.

LiU's rule book for education at first-cycle and second-cycle levels is available at http://stydokument.liu.se/Regelsamling/Innehall/Utbildning_pa_grund-_och_avancerad_niva.
