

# Designing Environmental Studies in Sustainable Development

Single subject and programme course

7.5 credits

Designing Environmental Studies in Sustainable  
Development

746A71

Valid from:

**Determined by**  
The Quality Board at the Faculty of Arts  
and Sciences

**Date determined**  
2011-06-14

**Revision date**  
2017-05-03

## Main field of study

Environmental Science

## Course level

Second cycle

## Advancement level

A1X

## Course offered for

- Master´s Programme in Science for Sustainable Development

## Entry requirements

Applicants must, by the closing date for application, hold a bachelor's degree/kandidatexamen (equivalent for example a professional degree) of at least 180 ECTS credits, including a 15 ECTS credit degree paper or equivalent. Relevant background is studies within natural science, social science, health science, humanities or engineering that relate to the environmental, social or economic aspects of sustainable development.

Applicants must, by the closing date for application, have passed at least 45 ECTS credits of the first year of the Master's Programme in Science for Sustainable Development, including the courses 'Critical Perspectives on Sustainable Development', 'Environmental and Resource Use Challenges' and 'Climate Science and Policy', or similar courses.

Documented knowledge of English equivalent to "Engelska B".

## Intended learning outcomes

On completion of the course the student should be able to:

- design a study in sustainable development
- analyse and discuss different scientific methods, their strengths and limitations, in relation to relevant examples within the field of knowledge
- formulate, analyse and present an environmental problem orally and in writing
- critically discuss the design and methodology of studies for sustainable development.

## Course content

The course contains of own field work, experimental design, laboratory exercises, workshops, lectures and seminars.

The content of the course is research design based on research questions within science for sustainable development, relevant in both natural and social science. It will include methods for sampling and gaining of data, analysis and presentation of results. The students will acquire knowledge and skills of various quantitative and qualitative methods for analysis of relationships between the environment and the society. The students will also design an own field study, including individually in-depth studies of chosen methods.

## Teaching and working methods

Field work, experimental design, laboratory exercises, workshops, lectures and seminars. Language of instruction: English.

## Examination

The course is examined through a combination of active participation in seminars and workshops, written assignments and a final paper. Each student shall act as a discussant on another student's paper. Detailed information about the examination can be found in the course study guide.

Students failing an exam covering either the entire course or part of the course twice are entitled to have a new examiner appointed for the reexamination.

Students who have passed an examination may not retake it in order to improve their grades.

## Grades

ECTS, EC

## Other information

Planning and implementation of a course must take its starting point in the wording of the syllabus. The course evaluation included in each course must therefore take up the question how well the course agrees with the syllabus. The course is carried out in such a way that both men's and women's experience and knowledge is made visible and developed.
