

# Biochemistry and Organic Chemistry

Programme course

6.0 credits

Biokemi och organisk kemi

8BKG21

Valid from: 2019 Spring semester

**Determined by**

The Board for First and Second Cycle  
Programmes at the Faculty of Medicine  
and Health Sciences

**Date determined**

2017-08-22

## Main field of study

Chemistry

## Course level

First cycle

## Advancement level

G1X

## Course offered for

- Bachelor's Programme in Experimental and Industrial Biomedicine

## Entry requirements

General entry requirements for undergraduate studies  
and

English corresponding to the level of English in Swedish upper secondary  
education (English 6)

And

Chemistry, Mathematics and Biology corresponding to the level in Swedish upper  
secondary education (Chemistry 2, Mathematic 4 and Biology 2)

Exemption from Swedish 3

## Intended learning outcomes

### Knowledge and understanding

On completion of the course, the student shall be able to:

- Give the structures of different amino acids and their properties
- Describe the structure of proteins using the concepts primary, secondary, tertiary and quaternary structures and understand the relationship between structure and function
- Describe the basic metabolism of carbohydrates and lipids, providing some examples of how this is regulated
- Describe common functional groups in organic chemistry, their properties and nomenclature
- Know the principles of reaction mechanisms in organic chemistry and their conformation and stereochemistry

### Skills and abilities

On completion of the course, the student shall be able to:

- Use basic separation- and analysis methods in biochemistry as well as interpret and present the results in a written report
- Apply organic chemistry nomenclature
- Use basic organic chemistry laboratory techniques

### Judgement ability and approach

On completion of the course, the student shall be able to:

- Assess the toxicity of common chemicals and appropriate methods for the disposal of chemical waste

## Course content

The course focuses on basic biochemistry and organic chemistry. In the biochemistry part, the focus is on the structure and properties of amino acids and proteins, the structure of nucleic acids and basic mechanisms of through which genes are replicated and translated into proteins. The course also includes an introduction to the catabolism and anabolism of carbohydrates and lipids and enzymology. Laboratory sessions cover basic experimental methods such as gel filtration, polyacrylamide gel electrophoresis and spectrophotometry, and, where appropriate, assessment of the safety of the chemicals involved.

The organic chemistry part focuses on nomenclature, structures and the chemical and physical properties of the most common functional groups.

Basic organic chemical reactions and stereochemistry, biomolecules and laboratory methods are also studied.

The course covers biochemistry, organic chemistry and molecular biology.

## Teaching and working methods

At the Faculty of Medicine and Health Sciences student centred and problem based learning make up the foundation of the teaching. The student takes responsibility for, studies and researches current content of the courses and study programme. The methods of the course work challenge the students to independently formulate questions for learning, to seek knowledge and in dialogue with others judge and evaluate achieved knowledge. Students in the Bachelor's programme in Experimental and Industrial Biomedicine work together in groups based on reality based and course related biomedical issues to apply their knowledges, develop their own learning, contribute to the fellow students' learning and to practice cooperation. Throughout the study programme theory is integrated with practical modules. The course methods and integration modules stimulates and support the student's ability to apply their knowledge and professional competence.

The work methods in this course are lectures, lessons, seminars and laboratory sessions.

## Examination

The form of examination is two individual written exams. In addition, active participation in compulsory elements is required in order to pass the course. Compulsory elements include group work, laboratory sessions, seminars, reports and written assignments.

The written examinations may be performed an unlimited number of times by those students who have not achieved a passing grade.

Point of time for retake examination must normally be announced no later than the time of the regular examination. The extent of the retake examination must be the same as the regular examination.

### CHANGE OF EXAMINER

A student who has obtained a failing grade twice for a course or a part of a course is, after request, entitled to be appointed another examiner, unless there are special reasons to the contrary.

### APPLICATION FOR EXAMINATION / WRITTEN EXAM

Instructions on how to apply for examinations are given prior to the beginning of each course.

## Grades

Four-grade scale, LiU, U, 3, 4, 5

## Course literature

A literature reference list must be set no later than two months before the course begins by the programme committee for the Bachelor's Programme in Experimental and Industrial Biomedicine. There is no compulsory course literature.

## Other information

Planning and implementation of the course is to be based on the wordings in the course syllabus. A course evaluation is compulsory for each course and should include how the course is in agreement with the course syllabus. The course coordinator will analyse the course evaluation and propose appropriate development of the course. The analysis and proposal will be returned to the students, the Director of Studies, and as needed to the Education Board, if related to general development and improvement.

The course is carried out in such a way that knowledge of gender, gender identity/expression, ethnicity, religion or other belief system, disability, sexual orientation and age is addressed, highlighted and communicated as part of the programme.

If the course is cancelled or undergoes major changes, examination is normally offered under this course syllabus, at a total of three occasions, within/in connection to the two following semesters, of which one in close proximity to the first examination.
