

Advanced Immunology

Programme course

7.5 credits

Avancerad immunologi

8MEA01

Valid from: 2019 Autumn semester

Determined by

The Board for First and Second Cycle
Programmes at the Faculty of Health
Sciences

Date determined

2012-12-07

Revision date

2014-10-06

Main field of study

Medical Biology

Course level

Second cycle

Advancement level

A1X

Course offered for

- Master's Programme in Experimental and Medical Biosciences

Specific information

The aim of the course is to provide the students with an advanced knowledge of cellular and molecular immunobiology and medical immunology. Particular emphasis is placed on regulation of the immune system and how defects in this regulation can lead to diseases. The course is elective semester one or three in the Master's Programme in Experimental and Medical Biosciences.

Entry requirements

The special eligibility requirement is the possession of the Degree of Bachelor of Sciences in a major subject area with relevance for biomedical sciences. This could include previous studies at faculties of medicine, technology/natural sciences, odontology or veterinary medicine. A major part of courses included in the Bachelor degree should be in subjects such as biochemistry, cell biology, molecular biology, genetics, gene technology, microbiology, physiology, immunology, histology, anatomy, and pathology.

Applicants must also have documented skills in English corresponding to the level of English in Swedish upper secondary education (English B). For applicants who have not studied in Swedish upper secondary education, skills in English are normally attested to by means of an international language test.

Intended learning outcomes

By the end of the course the students will be able to:

Knowledge and understanding

- Identify and summarize the current status of knowledge within areas of cellular and molecular immunology
- Understand normal regulation of immunity and how aberrations in the regulation can lead to immunological diseases
- Understand the principles of immunomodulatory treatment and the role of the immune system in development of tumours

Competence and skills

- Plan and implement a given laboratory experiment on immune responses in vitro and evaluate and interpret the generated data

Judgement and approach

- Summarize, present, and evaluate current research in immunology in order to discuss new hypotheses within the area

Course content

- General immunobiology
- Immunogenetics
- Immunopathology
- Methods in immunology, in particular multiple bead array and ELISA for measurement of cytokines and chemokines
- Regulation of the immune system and homeostasis
- Immunological diseases: autoimmunity, allergy, inflammation, infections and immunological aspects of cancer
- Immunotherapy

Teaching and working methods

General: Linköping University Master's Programme in Experimental and Medical Biosciences applies student-centered learning among which Problem Based Learning (PBL) is one pedagogical philosophy and method. To prepare the students for future employment, practical and experimental work in laboratory settings are important parts of the programme in courses as well as in individual projects.

Specific: In this course lectures, tutorial groups, literature in-depth studies, seminars, and laboratory work are used.

Examination

Compulsory items

Active participation in the compulsory parts is necessary to pass the course, and assessment of them is carried out continuously. Compulsory parts in this course are: Tutorial groups, laboratory work and seminars.

Examination

Individual written examination.

Written laboratory report; group assignment with individual assessment.

Written report and oral presentation of literature study; group assignment with individual assessment.

Scope of re-examination

The extent of a re-examination shall be similar to the regular examination.

Change of examiners

Students who have failed the course or part of the course twice are entitled to request another examiner for the following examination occasion, unless specific reasons are present.

Registration for examination

The procedure for registration should be stated prior to the commencement of each course. In other respects, regulations concerning examination and examiners are applied in accordance with Linköping University policy.

Grades

Three-grade scale, U, G, VG

Other information

The planning and implementation of a course must take its starting point in the wording of the course plan. The course evaluation included in each course must therefore take up the question how well the course agrees with the course plan.

The course is carried out in such a way that both men's and women's experience and knowledge is made visible and developed.

If the course is withdrawn, or is subject to major changes, examinations according to this course plan are normally offered on a total of three occasions within one year, one of them in close connection to the first examination.
