Course offered for

- Master's Programme in Experimental and Medical Biosciences

Entry requirements

The special eligibility requirement possession of the Degree of Bachelor of Sciences in a major subject area with relevance for biomedical sciences. This could include previous studies at faculties of medicine, technology/natural sciences, odontology or veterinary medicine. A major part of courses included in the Bachelor degree should be in subjects such as biochemistry, cell biology, molecular biology, genetics, gene technology, microbiology, physiology, immunology, histology, anatomy, and pathology. Applicants must also have documented skills in English corresponding to the level of English in Swedish upper secondary education (English B). For applicants who have not studied in Swedish upper secondary education, skills in English are normally attested to by means of an international language test.

Intended learning outcomes

In this course the student will acquire an advanced knowledge of the mechanisms of drug action on a molecular and cellular level to understand the medical effects of drugs. The course comprises in-depth knowledge in pharmacodynamics (how drugs act) and includes recent research within selected fields of pharmacology. The course is elective semester one or three in the Master's Programme in Experimental and Medical Biosciences.

LEARNING OUTCOMES

By the end of the course the students will be able to:

Knowledge and understanding

- Understand the mechanisms of action of different drugs on a molecular, cellular and physiological level
- Analyze drug effects on a molecular to medical level
- Analyze advanced models of drug/receptor protein interactions

Competence and skills

- Apply an advanced knowledge in pharmacological sciences in order to design and perform laboratory studies and to critically interpret obtained results

Judgement and approach

- Evaluate and analyze complex pharmacological questions presented in the scientific literature

Course content

- Current concept of drug/receptor protein interaction
- Mechanisms and medical effects of drugs that interact with G-protein coupled receptors
- Drugs that interact with transmembrane proteins
- Drugs that interfere with intracellular target proteins
- Drugs that affect the neuron and neurotransmission
- Pharmacokinetics
- Recent research within some field of pharmacology; pharmacodynamics and pharmacokinetics

Teaching and working methods

General: Linköping University Master's Programme in Experimental and Medical Biosciences applies student-centered learning among which Problem Based Learning (PBL) is one pedagogical philosophy and method. To prepare the students for future employment, practical and experimental work in laboratory settings are important parts of the programme in courses as well as in individual projects.

Specific: In this course lectures, tutorial groups, seminars and laboratory work are used.

Examination

Compulsory items

Active participation in the compulsory parts is necessary to pass the course, and assessment of them is carried out continuously. Compulsory parts in this course are: tutorial groups, group assignments- including laboratory work and in-depth studies, and seminars.

Examination

Individual written examination.

Grades

The grades for the course are either fail (F), pass (G) or pass with distinction (VG). A weighting of the grades on the laboratory work and individual written exam form the basis for the final grade of the course.

If special circumstances prevail, and if it is possible with consideration of the nature of the compulsory component, the examiner may decide to replace the

compulsory component with another equivalent component.

Application for examination

Instructions on how to apply for examinations are given prior to the beginning of each course.

Re-examination

The date for re-examination should normally be announced by the date of the regular examination at latest; in which case the scope must be the same as at the regular examination.

Examination for students with disabilities

If the LiU coordinator for students with disabilities has granted a student the right to an adapted examination for a written examination in an examination hall, the student has the right to it.

If the coordinator has recommended for the student an adapted examination or alternative form of examination, the examiner may grant this if the examiner assesses that it is possible, based on consideration of the course objectives.

An examiner may also decide that an adapted examination or alternative form of examination if the examiner assessed that special circumstances prevail, and the examiner assesses that it is possible while maintaining the objectives of the course.

Nomination of another examiner

A student who has taken two examinations in a course or a part of a course without obtaining a pass grade is entitled to the nomination of another examiner, unless there are special reasons to the contrary.

Grades

Three-grade scale, U, G, VG

Other information

Planning and implementation of the course is to be based on the wordings in the course syllabus. A course evaluation is compulsory for each course and should include how the course is in agreement with the course syllabus. The course coordinator will analyse the course evaluation and propose appropriate development of the course. The analysis and proposal will be returned to the students, the Director of Studies, and as needed to the Education Board, if related to general development and improvement.

The course is conducted in such a way that there are equal opportunities with regard to sex, transgender identity or expression, ethnicity, religion or other belief, disability, sexual orientation and age.

If the course is cancelled or undergoes major changes, examination is normally offered under this course syllabus, at a total of three occasions, within/in connection to the two following semesters, of which one in close proximity to the first examination.

If special circumstances prevail, the vice-chancellor may in a special decision specify the preconditions for temporary deviations from this course syllabus, and delegate the right to take such decisions.
