Course offered for

- Master of Science in Computer Science and Engineering
- Master of Science in Industrial Engineering and Management
- Master of Science in Information Technology
- Master of Science in Computer Science and Software Engineering
- Master of Science in Industrial Engineering and Management - International
- Master's Programme in Computer Science

Prerequisites

Basic course in security. Students are expected to have knowledge of operating systems, programming languages, and software engineering. Students should be able to develop, test and debug software in Unix or Linux environments. Some experience with C-programming as well as basic knowledge of web application development are recommended.

Intended learning outcomes

Students taking this course will learn about the issues underlying software security, and develop the skills needed to build secure software. The course covers methods, tools, and best practices for building secure software. Students completing this course should be able to:

- identify and analyze security problems in software;
- formulate security requirements for software;
- devise, evaluate, and explain solutions to software security;
- critically evaluate the effectiveness of methods, state-of-art tools, and best practices, for detecting and preventing vulnerabilities; and
- design and write secure software.

Course content

The course covers:

- vulnerability discovery and analysis, and supporting tools;
- analysis of infamous vulnerabilities and their exploits;
- attack and vulnerability modeling;
- security requirements analysis and design for security;
- principles for secure programming;
- static and dynamic intrusion prevention mechanisms;
- security testing and evaluation; and
- systematic approaches to building secure software.

Vulnerabilities, attacks, and principles for secure programming are studied with an emphasis on programs written in C/C++ and web applications.
Teaching and working methods

The course consists of lectures and laboratory work.

Other information

About teaching and examination language

The teaching language is presented in the Overview tab for each course. The examination language relates to the teaching language as follows:

- If teaching language is “Swedish”, the course as a whole could be given in Swedish, or partly in English. Examination language is Swedish, but parts of the examination can be in English.
- If teaching language is “English”, the course as a whole is taught in English. Examination language is English.
- If teaching language is “Swedish/English”, the course as a whole will be taught in English if students without prior knowledge of the Swedish language participate. Examination language is Swedish or English depending on teaching language.

Other

The course is conducted in a manner where both men’s and women’s experience and knowledge are made visible and developed.

The planning and implementation of a course should correspond to the course syllabus. The course evaluation should therefore be conducted with the course syllabus as a starting point.

The course is campus-based at the location specified for the course, unless otherwise stated under “Teaching and working methods”. Please note, in a campus-based course occasional remote sessions could be included.

If special circumstances prevail, the vice-chancellor may in a special decision specify the preconditions for temporary deviations from this course syllabus, and delegate the right to take such decisions.
Common rules

Regulations (apply to LiU in its entirety)

The university is a government agency whose operations are regulated by legislation and ordinances, which include the Higher Education Act and the Higher Education Ordinance. In addition to legislation and ordinances, operations are subject to several policy documents. The Linköping University rule book collects currently valid decisions of a regulatory nature taken by the university board, the vice-chancellor and faculty/department boards.

LiU’s rule book for education at first-cycle and second-cycle levels is available at http://styrldokument.liu.se/Regelsamling/Innehall/Utbildning_pa_grund_och_avancerad_niva.
