

## Aircraft Aerodynamics - Project Course

Aircraft Aerodynamics - Project Course  
6 credits

Programme course

TMMV26

Valid from: 2023 Spring semester

<b>Determined by</b>	<b>Main field of study</b>	
Board of Studies for Mechanical Engineering and Design	Aeronautical Engineering, Mechanical Engineering	
<b>Date determined</b>	<b>Course level</b>	<b>Progressive specialisation</b>
2022-08-31	Second cycle	A1X
<b>Revised by</b>	<b>Disciplinary domain</b>	
	Technology	
<b>Revision date</b>	<b>Subject group</b>	
	Mechanical Engineering	
<b>Offered first time</b>	<b>Offered for the last time</b>	
Autumn semester 2020		
<b>Department</b>	<b>Replaced by</b>	
Institutionen för ekonomisk och industriell utveckling		

## Course offered for

- Master of Science in Mechanical Engineering
- Master's Programme in Aeronautical Engineering

## Entry requirements

This course concludes a master profile for the M and AER program and it is required that the student has already passed the preparatory profile courses. Prior to the start of the course, the examiner/director of studies will verify that participating students have sufficient knowledge, see information under Prerequisites.

## Prerequisites

Aerodynamics basic and advanced courses, Computational fluid dynamics basic and advanced, Engineering Systems Design, Aircraft conceptual design, Prototype Realization - project course.

## Intended learning outcomes

The aim of the course is to develop skills for making an integrated aerodynamic analysis of an aircraft concept. After completing the course the students will

- be able to transform a conceptual design into a model for an aerodynamic analysis, and for design refinement.
- have knowledge about using CFD tools for aerodynamics.
- be able to define design cases for aerodynamic analysis.
- be able to analyze and present the results from the analysis in a scientific way
- have skills to plan and conduct the work efficiently.

## Course content

Theory and methodology from previous courses are used to conduct an aerodynamic analysis of a concept. Improvements are evaluated and proposed. Planning and time management in order to deliver results on time.

## Teaching and working methods

The course is carried out as a project with regular meetings. In addition there can be lectures in project specific technology when needed. The result from the project is a design of product presented orally and in a written report.

## Examination

PRA1      Project work      6 credits      U, G

## Grades

Two-grade scale, U, G

## Other information

### About teaching and examination language

The teaching language is presented in the Overview tab for each course. The examination language relates to the teaching language as follows:

- If teaching language is “Swedish”, the course as a whole could be given in Swedish, or partly in English. Examination language is Swedish, but parts of the examination can be in English.
- If teaching language is “English”, the course as a whole is taught in English. Examination language is English.
- If teaching language is “Swedish/English”, the course as a whole will be taught in English if students without prior knowledge of the Swedish language participate. Examination language is Swedish or English depending on teaching language.

### Other

The course is conducted in a manner where both men's and women's experience and knowledge are made visible and developed.

The planning and implementation of a course should correspond to the course syllabus. The course evaluation should therefore be conducted with the course syllabus as a starting point.

The course is campus-based at the location specified for the course, unless otherwise stated under “Teaching and working methods”. Please note, in a campus-based course occasional remote sessions could be included.

If special circumstances prevail, the vice-chancellor may in a special decision specify the preconditions for temporary deviations from this course syllabus, and delegate the right to take such decisions.
