

# Mathematics

Programme course

12 credits

Matematik

TNSL01

Valid from: 2017 Spring semester

**Determined by**  
Board of Studies for Industrial  
Engineering and Logistics

**Date determined**  
2017-01-25

## Main field of study

No Main Field of Study

## Course level

First cycle

## Advancement level

G1X

## Course offered for

- Air Transportation and Logistics, Bachelor's Programme
- Civic Logistics, Bachelor's Programme

## Entry requirements

Note: Admission requirements for non-programme students usually also include admission requirements for the programme and threshold requirements for progression within the programme, or corresponding.

## Prerequisites

See rules for admission to the Civic Logistics at Linköpings university.

## Intended learning outcomes

The course aims to give elementary education in mathematics, where the goal is to give you as a student a stable ground for university education. You should as a student be familiar with mathematical concepts, conversation and connection in the course, as a platform for other courses on the program. After completion of the course, the student should be able to read and interpret mathematical text and,

- handle simple algebraic expressions with real and complex numbers.
- set up and solve equations, linear systems of equations and inequalities.
- study the elementary functions with derivatives, limits to draw conclusions regarding the properties of the functions.
- explain and use calculus rules / definition for power, logarithm, limits, derivative, antiderivative, integrals and complex number.
- use unit circle to define trigonometric identities, solve trigonometric equations and graphing trigonometric functions.
- use standard techniques to calculate antiderivatives and definite integrals.
- handle differential equations of first and second order.
- use Taylor expansions to approximate functions.

## Course content

Algebraic expressions, calculation rules for real and complex numbers. Definitions and properties of the elementary functions. Geometry and trigonometry. Limits and derivatives. Antiderivatives and integrals. Complex numbers and absolute value. Differential equations of first and second order. Taylors and Maclaurins formal.

## Teaching and working methods

Teaching is done in lectures, problem classes and seminars. The examination consists of two written test and hand-in assignments. The course runs over the entire autumn semester.

## Examination

TEN1	Written examination, part 1	5 credits	U, 3, 4, 5
TEN2	Written examination, part 2	5 credits	U, 3, 4, 5
UPG1	Oral and written examination part 1	1 credits	U, G
UPG2	Oral and written examination part 2	1 credits	U, G

## Grades

Four-grade scale, LiU, U, 3, 4, 5

## Department

Institutionen för teknik och naturvetenskap

## Director of Studies or equivalent

George Baravdish

## Examiner

Vivianne Deniz

## Education components

Preliminary scheduled hours: 140 h

Recommended self-study hours: 180 h

## Course literature

### Additional literature

#### Books

ITN Norrköping, *Övningsuppgifter del 1*

ITN Norrköping, *Övningsuppgifter del 2*

Månsson, Jonas, Nordbeck, Patrik, (2011) *Endimensionell analys*

ISBN: 9789144056104

Lund : Studentlitteratur, 2011

## Common rules

Regulations (apply to LiU in its entirety)

The university is a government agency whose operations are regulated by legislation and ordinances, which include the Higher Education Act and the Higher Education Ordinance. In addition to legislation and ordinances, operations are subject to several policy documents. The Linköping University rule book collects currently valid decisions of a regulatory nature taken by the university board, the vice-chancellor and faculty/department boards.

LiU's rule book for education at first-cycle and second-cycle levels is available at [http://stydokument.liu.se/Regelsamling/Innehall/Utbildning\\_pa\\_grund-\\_och\\_avancerad\\_niva](http://stydokument.liu.se/Regelsamling/Innehall/Utbildning_pa_grund-_och_avancerad_niva).
