

Telecommunication

Programme course

6 credits

Telekommunikation

TSKS02

Valid from: 2018 Spring semester

Determined by

Board of Studies for Electrical
Engineering, Physics and Mathematics

Date determined

Main field of study

Electrical Engineering

Course level

First cycle

Advancement level

G2X

Course offered for

- Computer Science, Master's Programme
- Engineering Electronics, B Sc in Engineering

Entry requirements

Note: Admission requirements for non-programme students usually also include admission requirements for the programme and threshold requirements for progression within the programme, or corresponding.

Prerequisites

From Calculus: Derivatives, integrals and limits.

From Linear algebra: Everything related to linear spaces.

Statistics/probability theory is desirable, but not absolutely necessary.

Obs! Students on the national Y, D and Is programs should take TSKS01 Digital Communication instead of this course.

Intended learning outcomes

After passing the course, the student should

- be generally acquainted with classical telecommunication, i.e., be able to briefly describe different telecommunication techniques, and be able to briefly account for some simple channel models.
- be able to describe problems that arise in telecommunication situations using own words, and be able to describe and, in a relevant way, compare methods to counteract those problems in deterministic terms.
- be able to, with some precision, analyze analog modulation methods deterministically in spectral terms.
- be able to, with some precision, handle sampling and reconstruction of band limited signals deterministically.
- be able to, with some precision, compare various standard choices of digital modulation methods and coding methods in terms of error probabilities, minimum distance and related concepts.
- be able to account for the connection between different concepts in the course in a structured way using adequate terminology.
- be able to implement simple telecommunication systems in block form and to empirically evaluate those systems.

Course content

- Simple channel models: Cables and radio channels, optical channels. Descriptions of the phenomena thermal noise and fading.
- Analog modulation in deterministic terms: AM, FM, PhM. Spectral properties, demodulation.
- Pulse modulation in deterministic terms: PAM, PWM, PPM, PCM. Sampling, modulation and reconstruction. Aliasing.
- Digital modulation: Common signal constellations, like FSK, PSK, QAM. Error probability expressions.
- Codes for error control: Binary symmetric channels. Binary linear codes, repetition codes, simple parity check codes, Hamming codes, product codes, cyclic codes and CRC codes. Basic parameters like length, dimension, size and minimum distance. Error detection and correction capabilities.
- Source coding: Tree codes, Huffman coding and run-length coding. Entropy, Kraft's inequality.

Note: Parts of this course can very well be somewhat simple for students with a thorough electrical engineering background, e.g., students on the programs Y, D and Is. A more reasonable choice in that case is TSKS01 Digital Communication. If that course is combined with TSdT14 Signal Theory, then that allows for follow-up courses about communication.

Teaching and working methods

The teaching is given in the form of lectures, problem classes and laborations.
The course runs over the entire autumn semester.

Examination

LAB1	Laboratory work	2 credits	U, G
TEN1	Written examination	4 credits	U, 3, 4, 5

The written exam (TEN1) consists of two parts, with minimum requirements in both parts for passing the exam. The first part is a question part, where the course aims

- be generally acquainted with...
- be able to describe...
- be able to account for...

are examined. The second part is a problem part, where the course aims

- be able to, with some precision,...

are examined.

In the laborations (LAB1) the following course aims are examined:

- be able to implement...
- be able to analyze a given...

The written exam can be replaced by oral examination in the event of very few students having signed up for an exam.

Grades

Four-grade scale, LiU, U, 3, 4, 5

Common rules

Course syllabus

A syllabus has been established for each course. The syllabus specifies the aim and contents of the course, and the prior knowledge that a student must have in order to be able to benefit from the course.

Timetabling

Courses are timetabled after a decision has been made for this course concerning its assignment to a timetable module. A central timetable is not drawn up for courses with fewer than five participants. Most project courses do not have a central timetable.

Interrupting a course

The vice-chancellor's decision concerning regulations for registration, deregistration and reporting results (Dnr LiU-2015-01241) states that interruptions in study are to be recorded in Ladok. Thus, all students who do not participate in a course for which they have registered must record the interruption, such that the registration on the course can be removed. Deregistration from a course is carried out using a web-based form: www.lith.liu.se/for-studenter/kurskomplettering?l=sv.

Cancelled courses

Courses with few participants (fewer than 10) may be cancelled or organised in a manner that differs from that stated in the course syllabus. The board of studies is to deliberate and decide whether a course is to be cancelled or changed from the course syllabus.

Regulations relating to examinations and examiners

Details are given in a decision in the university's rule book:
<http://styrdokument.liu.se/Regelsamling/VisaBeslut/622678>.

Forms of examination

Examination

Written and oral examinations are held at least three times a year: once immediately after the end of the course, once in August, and once (usually) in one of the re-examination periods. Examinations held at other times are to follow a decision of the board of studies.

Principles for examination scheduling for courses that follow the study periods:

- courses given in VT1 are examined for the first time in March, with re-

examination in June and August

- courses given in VT2 are examined for the first time in May, with re-examination in August and October
- courses given in HT1 are examined for the first time in October, with re-examination in January and August
- courses given in HT2 are examined for the first time in January, with re-examination at Easter and in August.

The examination schedule is based on the structure of timetable modules, but there may be deviations from this, mainly in the case of courses that are studied and examined for several programmes and in lower grades (i.e. 1 and 2).

- Examinations for courses that the board of studies has decided are to be held in alternate years are held only three times during the year in which the course is given.
- Examinations for courses that are cancelled or rescheduled such that they are not given in one or several years are held three times during the year that immediately follows the course, with examination scheduling that corresponds to the scheduling that was in force before the course was cancelled or rescheduled.
- If teaching is no longer given for a course, three examination occurrences are held during the immediately subsequent year, while examinations are at the same time held for any replacement course that is given, or alternatively in association with other re-examination opportunities. Furthermore, an examination is held on one further occasion during the next subsequent year, unless the board of studies determines otherwise.
- If a course is given during several periods of the year (for programmes, or on different occasions for different programmes) the board or boards of studies determine together the scheduling and frequency of re-examination occasions.

Registration for examination

In order to take an examination, a student must register in advance at the Student Portal during the registration period, which opens 30 days before the date of the examination and closes 10 days before it. Candidates are informed of the location of the examination by email, four days in advance. Students who have not registered for an examination run the risk of being refused admittance to the examination, if space is not available.

Symbols used in the examination registration system:

** denotes that the examination is being given for the penultimate time.

* denotes that the examination is being given for the last time.

Code of conduct for students during examinations

Details are given in a decision in the university's rule book:
<http://styrdokument.liu.se/Regelsamling/VisaBeslut/622682>.

Retakes for higher grade

Students at the Institute of Technology at LiU have the right to retake written examinations and computer-based examinations in an attempt to achieve a higher grade. This is valid for all examination components with code "TEN" and "DAT". The same right may not be exercised for other examination components, unless otherwise specified in the course syllabus.

Retakes of other forms of examination

Regulations concerning retakes of other forms of examination than written examinations and computer-based examinations are given in the LiU regulations for examinations and examiners,

<http://stydokument.liu.se/Regelsamling/VisaBeslut/622678>.

Plagiarism

For examinations that involve the writing of reports, in cases in which it can be assumed that the student has had access to other sources (such as during project work, writing essays, etc.), the material submitted must be prepared in accordance with principles for acceptable practice when referring to sources (references or quotations for which the source is specified) when the text, images, ideas, data, etc. of other people are used. It is also to be made clear whether the author has reused his or her own text, images, ideas, data, etc. from previous examinations.

A failure to specify such sources may be regarded as attempted deception during examination.

Attempts to cheat

In the event of a suspected attempt by a student to cheat during an examination, or when study performance is to be assessed as specified in Chapter 10 of the Higher Education Ordinance, the examiner is to report this to the disciplinary board of the university. Possible consequences for the student are suspension from study and a formal warning. More information is available at <https://www.student.liu.se/studenttjanster/lagar-regler-rattigheter?l=sv>.

Grades

The grades that are preferably to be used are Fail (U), Pass (3), Pass not without distinction (4) and Pass with distinction (5). Courses under the auspices of the faculty board of the Faculty of Science and Engineering (Institute of Technology) are to be given special attention in this regard.

1. Grades U, 3, 4, 5 are to be awarded for courses that have written examinations.
2. Grades Fail (U) and Pass (G) may be awarded for courses with a large degree of practical components such as laboratory work, project work and group work.

Examination components

1. Grades U, 3, 4, 5 are to be awarded for written examinations (TEN).
2. Grades Fail (U) and Pass (G) are to be used for undergraduate projects and other independent work.

3. Examination components for which the grades Fail (U) and Pass (G) may be awarded are laboratory work (LAB), project work (PRA), preparatory written examination (KTR), oral examination (MUN), computer-based examination (DAT), home assignment (HEM), and assignment (UPG).
4. Students receive grades either Fail (U) or Pass (G) for other examination components in which the examination criteria are satisfied principally through active attendance such as other examination (ANN), tutorial group (BAS) or examination item (MOM).

The examination results for a student are reported at the relevant department.

Regulations (apply to LiU in its entirety)

The university is a government agency whose operations are regulated by legislation and ordinances, which include the Higher Education Act and the Higher Education Ordinance. In addition to legislation and ordinances, operations are subject to several policy documents. The Linköping University rule book collects currently valid decisions of a regulatory nature taken by the university board, the vice-chancellor and faculty/department boards.

LiU's rule book for education at first-cycle and second-cycle levels is available at http://styrdokument.liu.se/Regelsamling/Innehall/Utbildning_pa_grund-_och_avancerad_niva.
